

Bowl planter CUBETO Color – a new eye-catcher with a natural stone look

The new bowl planter CUBETO Color with its natural looking surface and its rough stone look is a real highlight of this year's novelties. The classical yet natural planter is available since mid-January 2017 and is perfect as a style element in living rooms, as a decorative element on patios or as a beautiful adornment for graves.

Decorated with plants, the bowl planter is a modern eye-catcher indoors and a stylish element of natural living. Outdoors the bowl looks great on pillars and ledges and harmonizes perfectly with the rest of the garden due to its stone-like appearance. Festive Christmas or colorful spring flowers as well as tasteful decoration for portals or a grave – the CUBETO Color is a real all-rounder for creative plant arrangements.

The well-proven LECHUZA sub-irrigation set with its 1.6 and 3 liter water tank provides plants with just the right amount of water and nutrients. When used outdoors, excessive rain water can drain thanks to the overflow system and removable drain plug, protecting plants from stagnant moisture. The bowl planter is made of light, high-quality polypropylene and therefore easy to move around.

The LECHUZA CUBETO Color is available in stores since January 2017 in the colors sand beige, graphite black and stone gray. It comes in two different sizes as an All-in-One Set including planter, planter liner, sub-irrigation set and LECHUZA-PON plant substrate.
