

Your holiday replacement – LECHUZA planters keep plants nourished even on hot days

Summer is the time to travel! For most, holidays are just around the corner. The suitcases are packed and levels of anticipation high. While holidaymakers relax in the sun and let their cares fall away, the sunniest time of the year poses a challenge for plants. Many flowers reach their peak flowering season in summer and require the greatest care and attention. What can you do though, if you don't have a nice neighbour or a good friend who will pop by every day to do the watering? Not a problem as, thanks to the LECHUZA planter with its integrated watering system, your favourite plants can support themselves and keep their leaves fresh even while you're on holiday!

Individual supply according to natural requirement

At the base of the planter is a water reservoir that holds up to 26 litres of water, depending on the planter model and size. The water level indicator provides a reliable measurement of the quantity of water in the water reservoir. Each plant absorbs exactly the amount of water and nutrients that it requires. At the same time, the plants outside in LECHUZA planters remain protected from too much water: thanks to the integrated drain plug, any excess water from summer downpours can drain out. This prevents waterlogging, which can damage the plants' roots. The core component of the irrigation system is the inorganic plant substrate LECHUZA-PON, which acts as a store for water, nutrients and fertiliser and which provides plants with an ideal ratio of air and water. Thanks to the intelligent irrigation system, looking after plants takes minimal effort - even while on holiday.

Other tips and tricks before going on holiday

If you go on a longer holiday we recommend taking precautionary measures before you go, so that plants in LECHUZA planters are also well looked after while you are away. Plants require considerably less energy and use less water from the reservoir when faded flowers and yellow leaves are removed beforehand. Planters that are in a sunny spot should be moved to a semi-shaded position while you are away - this also reduces the amount of water the plants require. To be on the safe side it is also advisable to lightly attach or position any climbing plants against a protective house wall so that they will not be affected by a blustery summer thunderstorm.

The beautiful and functional planters made from high-quality plastic are not only the perfect holiday cover; they will also look after your favourite plants the whole year round extremely effectively.

About LECHUZA

geobra Brandstätter Stiftung & Co. KG, headquartered in Zirndorf (near Nuremberg), is the manufacturer of PLAYMOBIL and one of Germany's largest toy producer. In addition, the innovative company has been developing, producing and distributing the LECHUZA brand of high-quality plastic planters since 2000 and designer garden furniture since 2015. The Brandstätter Group employs over 4.400 members of staff worldwide.
